Excerpt: .legitimate field of the private plant there is no reason for the existence of the many plants supplying power to industries not included in this category Most factories, except those located in a region of all year round temperate climate, require heat. Many industries also consume large quantities of heat in the various processes included in the manufacture of their products. In a large majority of cases, the exhaust from an engine driving a generator, has sufficiently high temperature to fit the needs of such industries. The necessary heat for keeping the building warm during cold weather can also be very economically supplied by the exhaust. Our idea of how the above paragraph should read is as follows: Although there are few industries where central station service does show an advantage over private power plants, there are certain industries especially adapted to the cheap...
