GRIN Verlag. Paperback. Book Condition: New. Paperback. 88 pages. Dimensions: 8.3in. x 5.8in. x 0.2in. Research Paper from the year 2012 in the subject Geography Earth Science - Meteorology, Aeronomy, Climatology, grade: 1, 3, Humboldt-University of Berlin (Leibniz-Zentrum fr Agrarlandschaftsforschung (ZALF) e. V.), language: English, comment: Gefrdert vom Bundesministerium fr Bildung und Forschung (Projektnummer BRA 11A35) innerhalb des Europischen Forschungsprojekt CLARIS LPB (Climate Change Assessment and Impact Studies in La Plata Basin) , abstract: Brazil is confronted with a high risk of vulnerability to climate change, not least due to its fragile, biologically diverse ecosystems. Taking into account its size in geographic, demographic and economic dimensions, the adaptation to climate change problems becomes highly complex. Changing rainfall patterns will mean poorer water resources and a reduced water supply. Agriculture will be affected, exacerbating the risk of famines. Less rain will also affect the hydropower supply which provides more than 80 per cent of the electricity Brazil generates. Floods, which are already a serious problem for various regions, may increase. Given abundant natural resources, Brazil started early to establish its energy sector largely on renewables. Therefore, in terms of mitigation Brazil has been doing very well. According to a research taking out by the NGO GermanWatch, that analyzed the efforts made by 56 countries being responsible for over 90 percent of CO2 emissions, Brazil is found at rank 8 (GermanWatch, 2008). But the country still needs to assess its vulnerability to climate change so it can prepare for the unavoidable effects of climate change and support policy decisions on how to adapt to the inevitable impacts. With a great share of the economy depending on natural resources and the importance of the agricultural sector, climate change adaptation will play a crucial role in promoting further economic growth and promote food security....
