Excerpt: . . . 13 3 with at least a one-quarter lag. Therefore, the first experimental ECEC introduces jobs into its calculation more quickly than the published estimates. However, the estimates for the unemployment rate coefficients do not change much. A more radical experimental ECEC uses the quarter of overlap between exiting and replacement quotes to smooth the transition to the replacement quotes. Assume that, after accounting for sampling variation, the difference in compensation between the incoming and outgoing jobs in the overlap quarter represents bias that has accumulated in the outgoing panel. Assume further that this bias accumulates at a constant rate as the panel ages. Compensation in previous quarters can then be adjusted by the bias estimate. This adjustment smoothes the transition to the replacement jobs, and it also helps to account for the lack of representativeness of the sample due to its infrequent replenishment. Table 2 shows estimates for the unemployment rate coefficient..
