

## Kansas Flours Chemical, Baking and Storage Tests Volume 202-214

Filesize: 7.48 MB

### ***Reviews***

*The publication is easy in read through better to recognize. It usually will not cost too much. You wont feel monotony at whenever you want of the time (that's what catalogs are for concerning when you question me).*

*(Rebecca Bechtelar)*

## KANSAS FLOURS CHEMICAL, BAKING AND STORAGE TESTS VOLUME 202-214

To download **Kansas Flours Chemical, Baking and Storage Tests Volume 202-214** PDF, please refer to the link listed below and download the ebook or get access to other information that are in conjunction with **KANSAS FLOURS CHEMICAL, BAKING AND STORAGE TESTS VOLUME 202-214** ebook.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 edition. Excerpt: . . . straight. The solubility of phosphorus increases as the numbers for the percentage grade increases. Not only is there a larger per cent of phosphorus soluble in the poorer commercial grades, but in these grades it is more easily soluble. Thus for the short patent the increase of the percentage of total soluble at the higher temperature and longer time over the lower temperature and shorter time is 12. 81 per cent (33. 64--20. 83), for the long patent the increase is 10. 73 (35. 87--25. 14), and for the straights the increase is 7. 71 per cent. This seems to indicate that the phosphorus in the poorer commercial grades of flour dissolves more rapidly than that in the better commercial grades. That is, the treatment for a shorter time, and at a lower temperature, extracts a relatively larger proportion of the soluble phosphorus in the flours which contain a larger proportion of the total flour made. The phosphorus in the streams near the tail end of the mill is relatively more soluble. The Relation of Acidity to Phosphorus. A few comparisons between these phosphorus determinations and the acidity averages are interesting. It was noted above that the acidity percentage increased with the poorer commercial grade of flours. Exactly the same condition is true in regard to the water-soluble and total phosphorus. These lower commercial grades of flour also have a larger percentage of ash. Acidity of flour seems, therefore, to be very closely associated...
