Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: . G. S.), Yuma azimuth station, Yuma No. 10, Yuma east base, C. G. S. Bench mark N Boundary monuments Nos. 91 and 128 (U. S. Mex.) were held fixed from the results of spirit leveling, their elevations being 358.27, 359-83. 9091. 99-35. 79-73.225.46, 1 480.1, and 1 666.12 meters, respectively. The leveling which fixed these elevations was done by the United States Geological Survey, by the United States and Mexico Boundary Commission, and by this Survey. The elevations of the remaining 26 stations connected by the observations are the unknowns determined by least squares from the 72 observed differences of elevation in the above table. The probable error of an observation of weight unity derived from this adjustment is 0.91 meter. Unit weight corresponds as in the other adjustments to reciprocal observations over a line 31.7 kilometers (193 miles) long. Station Graham (U. S. G. S.) may be assumed to be the one least accurately determined, and the probable error computed for its elevation is 0.43 meter from the vertical angle measures alone. This probable error, combined with the probable error of the stations fixed by the spirit leveling, may be stated to be 0.5 meter. ELEVATIONS. The datum for all the elevations is mean sea level. The stations are in three classes: First, those fixed directly by the spirit leveling and of which the elevations are subject to a probable error of 0.05 meter; second, the stations in the main scheme fixed by reciprocal measures...
